

## **1. Project Overview :**

The **Rice Mill CRM Application** is a comprehensive solution for managing and simplifying rice production and sales tracking. It enables daily reporting on rice quantity, type, and sales, which is then communicated to the owners. This CRM leverages customer relationship management to enhance customer engagement, streamline operations, and improve efficiency in the rice mill factory. The project aims to deliver a user-friendly application that meets the specific operational needs of a rice mill.

## **2. Objectives :**

**Business Goals:** The Rice Mill CRM Application will automate daily production and revenue reporting, providing owners with clear insights into operational performance. It will also implement customer analytics to identify buying trends and popular rice varieties, enabling targeted marketing and better customer understanding. Additionally, the application will streamline resource allocation by forecasting demand and analyzing sales patterns, helping the business optimize inventory and manage resources efficiently.

**Specific Outcomes:** The Rice Mill CRM Application will automate daily production and revenue reporting, track customer buying trends, and optimize resource allocation based on demand forecasts and sales patterns, providing clear insights for operational efficiency.

## **3. Salesforce Key Features and Concepts Utilized :**

### **1. Reporting and Dashboards:**

- **Daily Sales and Production Reports:** Generates detailed reports on how much rice is produced & sold each day.
- **Revenue Reports:** Provides insights into daily revenue generated.
- **Customer Analytics:** Tracks popular rice types and most frequent buyers.
- **Resource Allocation:** Helps owners understand data for better resource allocation and future planning.

## 2. Rollup Summary Field:

- **Purpose:** Summarizes data from a child object to a parent object that shares a master-detail relationship.
- **Functions:** Can use COUNT, SUM, MIN, and MAX functions.

## 3. Cross-Object Formula Field:

- **Purpose:** References fields from another object in Salesforce.
- **Function:** Calculates the total amount payable by multiplying the number of rice units taken by the price per kg.

## 4. Validation Rules:

- **Purpose:** Ensures data integrity by validating user inputs.
- **Is Blank Formula:** Verifies if a field is blank and displays an error message if the rule returns a value of "True."

## 5. Permission Sets:

- **Wide Defaults (OWD):** Defines the baseline level of access for the most restricted user.
- **Roles and Access:**
- **Organization Owner:** Can view records of employers and workers.
- **Employer:** Can view records of workers.

## 4. Detailed Steps to Solution Design :

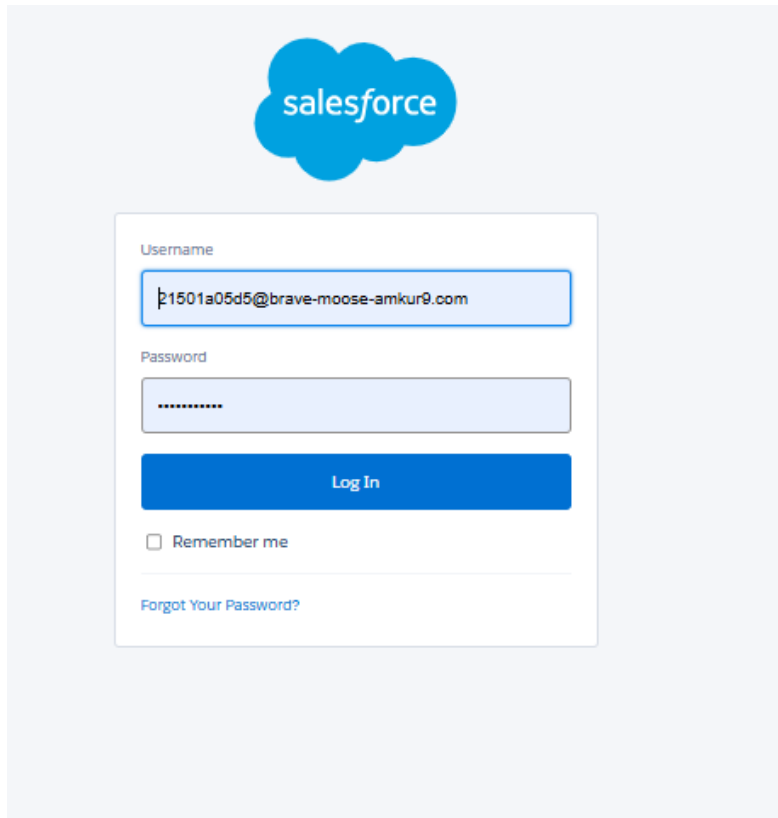

Activity 1: Creating Developer Account and Account activation.

**Steps:**

- On the sign up form, enter the following details
- Click on sign me up after filling these.
- First name & Last name
- Email
- Role : Developer
- Company : College Name
- Country : India
- Postal Code : pin code
- Username : should be a combination of your name and company
- This need not be an actual email id, you can give anything in the format.  
username@organization.com

**ACTIVATION :**

Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins

## **Activity 2: Objects**

-

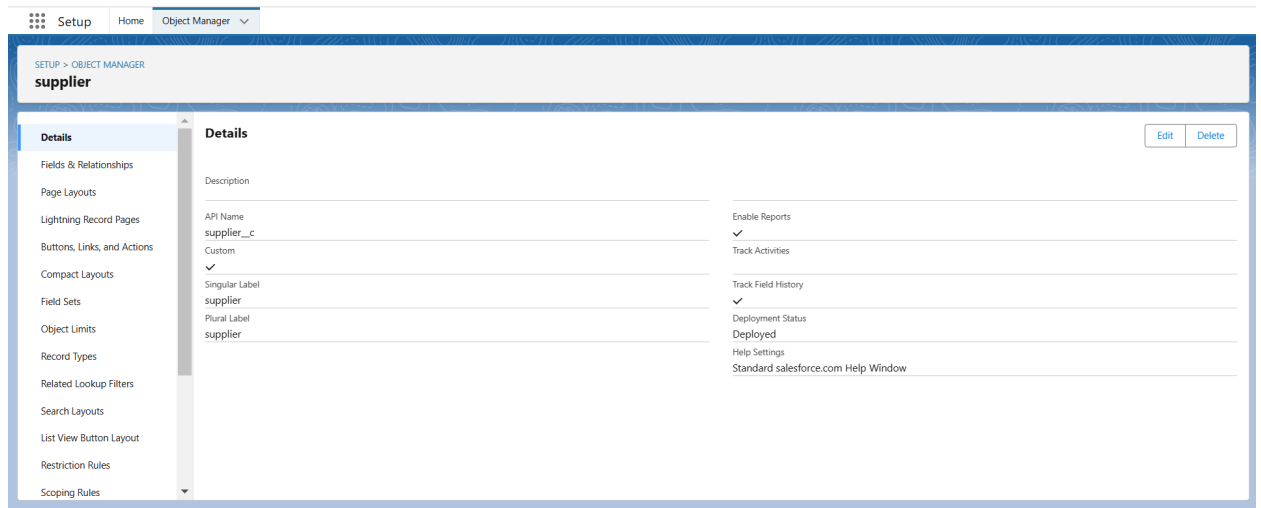

Salesforce objects are of two types:

1. **Standard Objects**: Standard objects are the kind of objects that are provided by salesforce.com such as users, contracts, reports, dashboards, etc.
2. **Custom Objects**: Custom objects are those objects that are created by users. They supply information that is unique and essential to their organization. are the heart of any application and provide a structure for sharing data.

**Steps:**

## Create Supplier Object

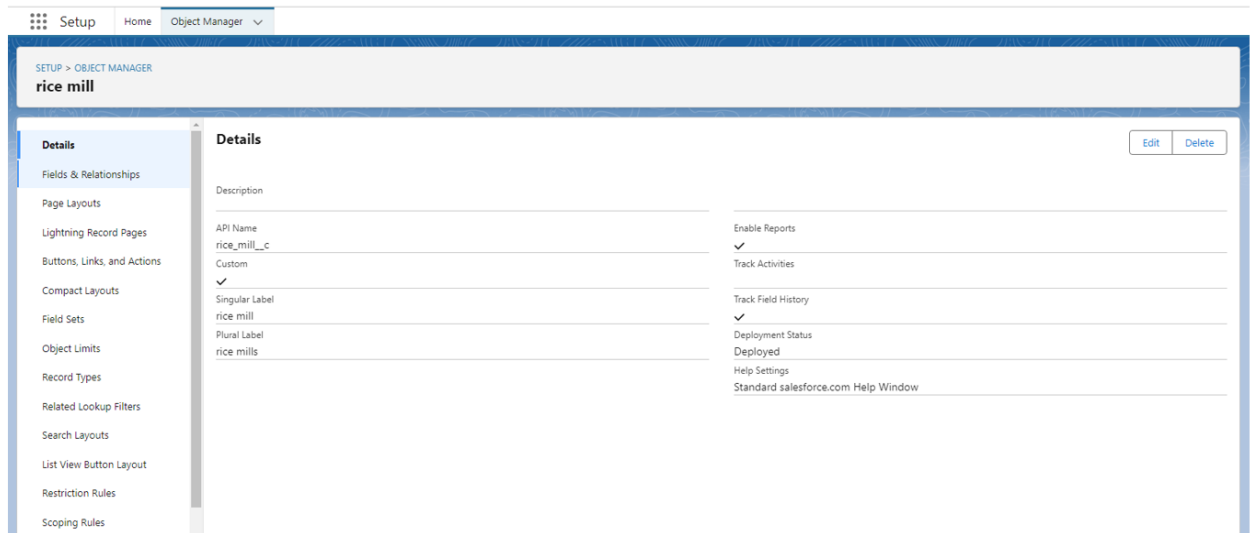

1. From the setup page >> Click on Object Manager>> Click on Create>>Click on Custom Object.
2. Enter the label name>>supplier
3. Plural label name>>supplier
4. Enter Record Name Label and Format
5. Record Name >> supplier Name
6. Data Type>>Text
7. Click on Allow reports and Track Field History and allow search
8. Allow search >> Save.

## Create Rice mill Object

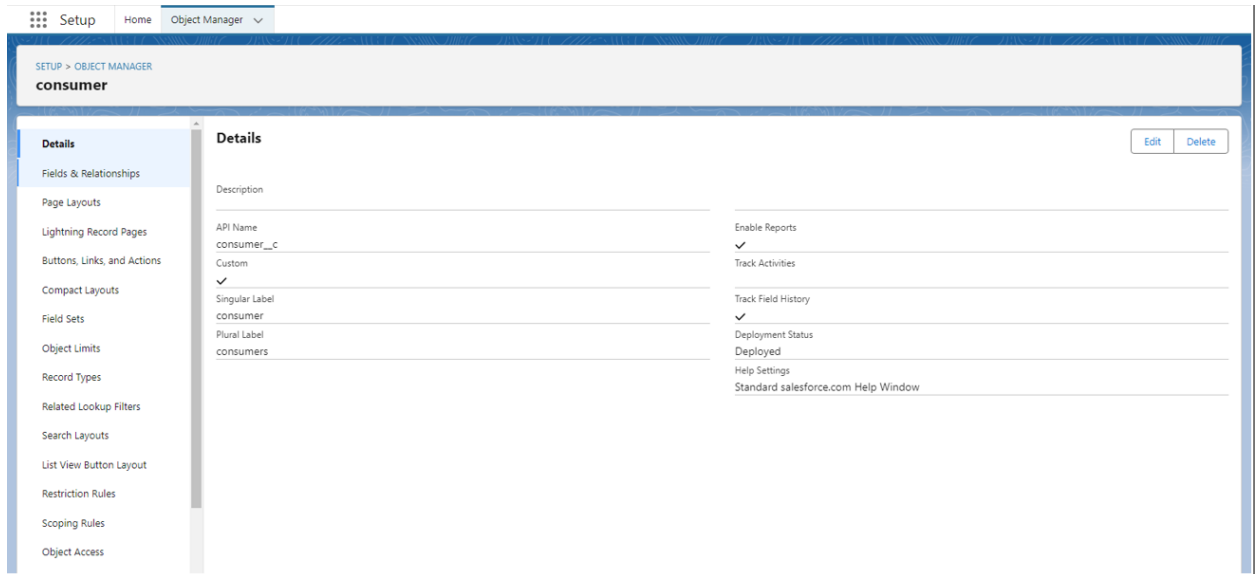

1. From the setup page >> Click on Object Manager>>Click on Create >> Click on Custom Object.
2. Enter the label name>>rice mill
3. Plural label name>> rice mills

4. Enter Record Name Label and Format
5. Record Name >>
6. Data Type >> Auto Number
7. Display Format >> rice-{000}
8. Starting number >> 1
9. Click on Allow reports and Track Field History, Allow Search and Save

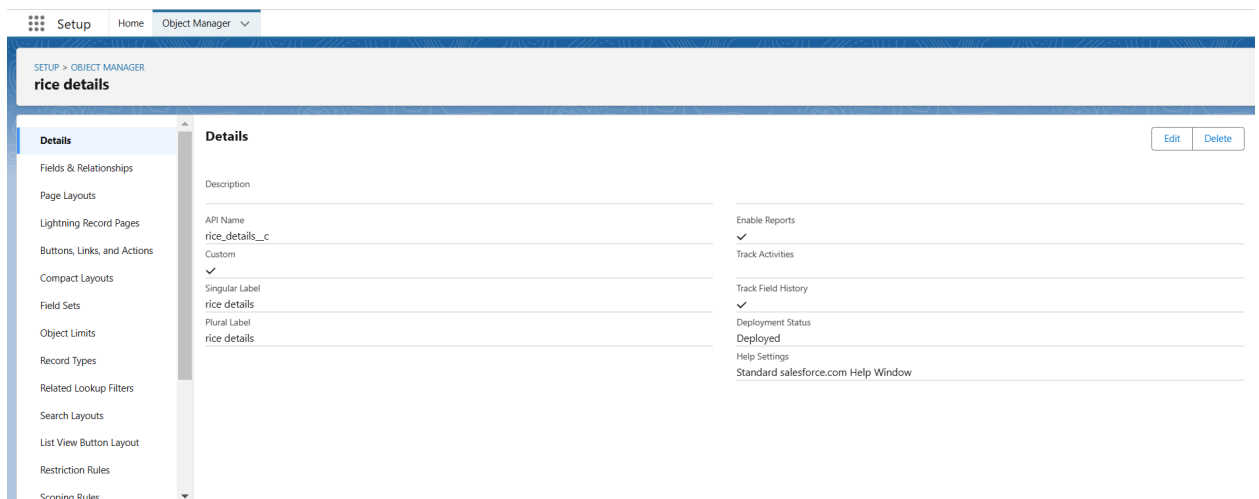

## **Create consumer Objects**

1. Use these display format for the consumer
2. label name >> consumer
3. Plural label name >> consumers
4. Display Format >> consumers-{000}
5. Starting number >> 1

## Create rice details Objects

1. Use these display format for the rice details
2. label name >> rice details
3. Plural label name >> rice details
4. Display Format >> rice-{000}
5. Starting Number >>1

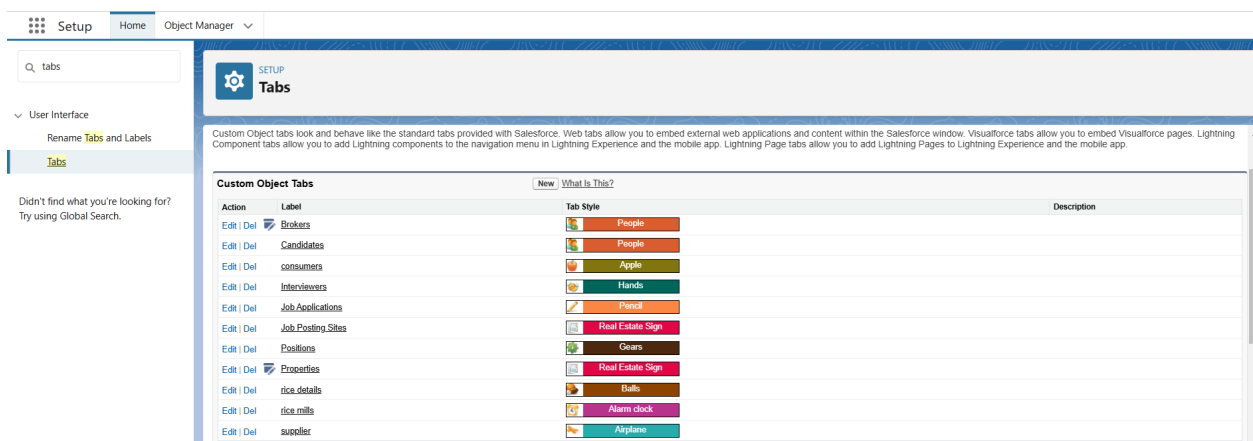

## Activity 3: Tabs

-

1. Creating a Custom Tab

2. To create a Tab:( supplier)
3. Go to setup page >> type Tabs in Quick Find bar >> click on tabs >> New (under custom object tab)
4. Select Object( supplier) >> Select the tab style >> Next (Add to profiles page) keep it as default >> Next (Add to Custom App) uncheck the include tab .
5. Make sure that the Append tab to users' existing personal customizations is checked.
6. Click save.

## **Activity 4: The Lightning App**

### **Create a Lightning App**

1. Go to setup page >> search “app manager” in quick find >> select “app manager” >> click on New lightning App
2. Fill the app name in app details as MY RICE >> Next >> (App option page) keep it as default >> Next >> (Utility Items) keep it as default >> Next.
3. Upload a photo that is related to your app.
4. To add Navigation Item:
5. Select the items (supplier, rice mill, consumer , Rice details ) from the search bar and move it using the arrow button >> Next.

6. To Add User Profiles:
7. Search profiles (System administrator) in the search bar >> click on the arrow button >> save & finish.

## Activity 5: Fields

### Creating the number field in rice details object

1. Go to the setup page >> click on object manager >> From drop down click edit for rice details object
2. Click on fields & relationship >> click on New.
3. Select Data type as “Number” and click Next.
4. Given the Field Label as “rice distributed ” and length as “ 5 ”.
5. Field Name will be auto populated, and click on Next- Next >> Save.

## Creating Junction Object

### Creating junction object as rice details with supplier & rice mill

1. Go to the setup page >> click on object manager >> From drop down click edit for rice details object
2. Click on fields & relationship - click on New.
3. Select “Master-Detail relationship” as data type and click Next.
4. Select the related object “supplier” and click next.
5. Give Field Label as “supplier Name” and click Next
6. Next >> Next >> Save & New.
7. Follow the same steps from 1 to 3.
8. Select the related object “rice mill” and click Next.
9. Give Field Label as “rice mill 1(one)” and click Next.
10. Next >> Next >> Save.

Step 1. Choose the field type

Specify the type of information that the custom field will contain.

Data Type

☐ None Selected

Select one of the data types below.

☐ Auto Number

A system-generated sequence number that uses a display format you define. The number is automatically incremented for each new record.

☐ Formula

A read-only field that derives its value from a formula expression you define. The formula field is updated when any of the source fields change.

☒ Roll-Up Summary

A read-only field that displays the sum, minimum, or maximum value of a field in a related list or the record count of all records listed in a related list.

## Creating the validation rule

1. Go to the setup page >>click on object manager >> From drop down click edit for consumer object.
2. Click on the validation rule >> click New.
3. Enter the Rule name as “Phonenumberoremailblankrule”.
4. Enter the description as “phone number and email number should not be blank”.
5. Enter the formula as “OR( ISBLANK( phone\_number\_\_c ) , ISBLANK( email\_\_c ) )” and check the syntax.
6. Under the error message write as “please fill in your phone number.”
7. Select error location “top of page”.
8. Save the validation rule.

## PROFILES

A profile is a group/collection of settings and permissions that define what a user can do in salesforce. Profile controls “Object permissions, Field permissions, User permissions, Tab settings, App settings, Apex class access, Visualforce page access, Page layouts, Record Types, Login hours & Login IP ranges. You can define profiles by the user's job function. For example System Administrator, Developer, Sales Representative.

### Owner Profile:

1. Go to setup >> type profiles in quick find box >> click on profiles >> clone the desired profile (Standard User) >> enter profile name (owner) >> Save.
2. Scroll down to Custom Object Permissions and Give access permissions for consumers, rice

details , rice mill and suppliers objects as mentioned in the below diagram.

### 3. Give access and save it.

The screenshot shows the Salesforce Setup interface. On the left, there's a navigation menu with 'Setup', 'Home', and 'Object Manager'. Below this is a search bar for 'profiles' and a 'Users' section with a 'Profiles' link. The main content area is titled 'Profiles' and shows the 'owner' profile. It includes a 'Profile Detail' section with fields for Name (owner), User License (Salesforce), Description, and Created By. Below this is a 'Page Layouts' section with a table of standard object layouts. The table has columns for the object type, the layout name, and a link to view the assignment. The objects listed are Global, Email Application, Home Page Layout, Access, Account, Active Scratch Org, and Alternative Payment Method. The layouts assigned are Global Layout, Not Assigned, OC Default, Access Layout, Account Layout, Active Scratch Org Layout, and Alternative Payment Method Layout. The 'Custom Profile' checkbox is checked.

## Employer Profile

1. Go to setup >> type profiles in quick find box >>click on profiles >> clone the desired profile (Standard Platform User) >> enter profile name (employer) >> Save.
2. While still on the profile page, then click Edit.
3. Select the Custom App settings as default for the rice mill.

Scroll down to Custom Object Permissions and Give access permissions for consumer, rice details , rice mill and suppliers objects as mentioned in the below diagram.

The screenshot shows the Salesforce Setup interface for the 'employer' profile. It includes a 'Profile Detail' section with fields for Name (employer), User License (Salesforce), Description, and Created By. Below this is a 'Page Layouts' section with a table of standard object layouts. The table has columns for the object type, the layout name, and a link to view the assignment. The objects listed are Global, Email Application, Home Page Layout, Access, Account, Active Scratch Org, and Alternative Payment Method. The layouts assigned are Global Layout, Not Assigned, OC Default, Access Layout, Account Layout, Active Scratch Org Layout, and Alternative Payment Method Layout. The 'Custom Profile' checkbox is checked. A text box highlights the profile name: 'Profile: employer ~ Salesforce - Developer Edition'.

## Worker Profile

1. Go to setup >> type profiles in quick find box >> click on profiles >> clone the desired profile (Standard Platform User) >> enter profile name (worker) >> Save.
2. While still on the profile page, then click Edit.
3. Select the Custom App settings as default for the rice mill.

Scroll down to Custom Object Permissions and Give access permissions for consumer, rice details , rice mill and suppliers objects as mentioned in the below

The screenshot shows the Salesforce Setup interface for the 'Profiles' section. The 'employer' profile is selected. The page displays the profile's details, including its name, user license, and description. Below the details, there is a section for 'Page Layouts' showing various standard object layouts assigned to the profile. A tooltip is visible over the 'Access Layout' link, displaying the text 'Profile: employer ~ Salesforce - Developer Edition'.

## Role & Role Hierarchy

### Creating owner Role:

1. Go to quick find >> Search for Roles >> click on set up roles.
2. Go to quick find >> Search for Roles >> click on set up roles.
3. Click on Expand All and click on add role under whom this role works.

4. Give Label as “owner” and Role name gets auto populated. Then click on Save.

### **Creating employer roles**

1. Go to quick find >>Search for Roles >>click on set up roles.
2. Click plus on CEO role, and click add role under owner.
3. Give Label as “employer” and Role name gets auto populated. Then click on Save.
4. Repeat the same steps, for another role.
5. Click plus on CEO role, and click plus on owner, and click add role under employer.
6. Give Label as “worker” and Role name gets auto populated. Then click on Save.

The screenshot shows the Salesforce Setup interface. The top navigation bar includes 'Setup', 'Home', and 'Object Manager'. A search bar on the left contains the text 'roles'. The left sidebar shows a navigation menu with 'Users', 'Roles' (highlighted), 'Feature Settings', 'Sales', 'Service', and 'Case Teams'. The main content area is titled 'Roles' and 'Creating the Role Hierarchy'. It includes instructions on how to build the role hierarchy and a tree diagram showing the existing hierarchy. The hierarchy starts with 'GVPCE' at the top, followed by 'CEO', 'CFO', 'COO', 'owner', 'employer', 'worker', and three SVP roles: 'SVP, Customer Service & Support', 'SVP, Human Resources', and 'SVP, Sales & Marketing'. Each role in the hierarchy has an 'Add Role' link next to it.

## **5. Testing and Validation:**

### **Creating an Apex Class(ConsumerRecord):**

1. Login to the Salesforce account and navigate to the gear account in the top right corner.
2. Then we can see the Developer console. Click on the developer console and you will navigate to a new console window.
3. Then you can see many tools in the Toolbar of the new console window. Click on File, New and Apex Class.
4. Enter the name of the class(ConsumerRecord) to create a new class file.

### **Code Snippet :**

```
-
public class ConsumerRecord {
    public static void sendEmailNotification (List<consumer__c> con){
        for(consumer__c c:con)
        {
            Messaging.SingleEmailMessage email = new Messaging.SingleEmailMessage();
            email.setToAddresses( new List<String>{c.email__c});
            email.setSubject('Welcome to our company');
            email.setPlainTextBody('Dear ' + ' ' + ',\n\nWelcome to MY RICE!'+ 'You have been seen as a
valuable customer to us. PLease continue your journey with us, while we try to provide you with good
quality resources.' + '\n' +
                                'We are proud to associate with valuable customers like you and we look
forward to collaborating with you by providing more and more exciting discounts or even product offers
too.' + '\n'
                                + 'So why taking a step back, take a leap of faith and shop with us more, while
we provide with the valuable products and offers' + '\n' + '\n' + '\n' +
                                'Thankyou for buying ' + ' ' + 'Here are some of the products that are brought by
```

```

the customers who similarly bought products like this'+'\n\n');
        Messaging.sendEmail(new List<Messaging.SingleEmailMessage>{email});

    }
}
}

```

### **Creating an Apex Trigger**

While still in the trailhead account, navigate to the gear icon in the top right corner. Click on developer console and you will be navigated to a new console window. Click on the File menu in the toolbar, and click on new? Trigger. Enter the trigger name and the object to be triggered.

Syntax For creating trigger :

```

The syntax for creating trigger is :
Trigger [trigger name] on [object name]( Before/After event) {
    //Trigger Logic
}

```

### **Code Snippet :**

```

trigger consumerTrigger on consumer__c (After insert) {
    if(trigger.isAfter && trigger.isInsert) {
        ConsumerRecord.sendEmailNotification(trigger.new);
    }
}

```

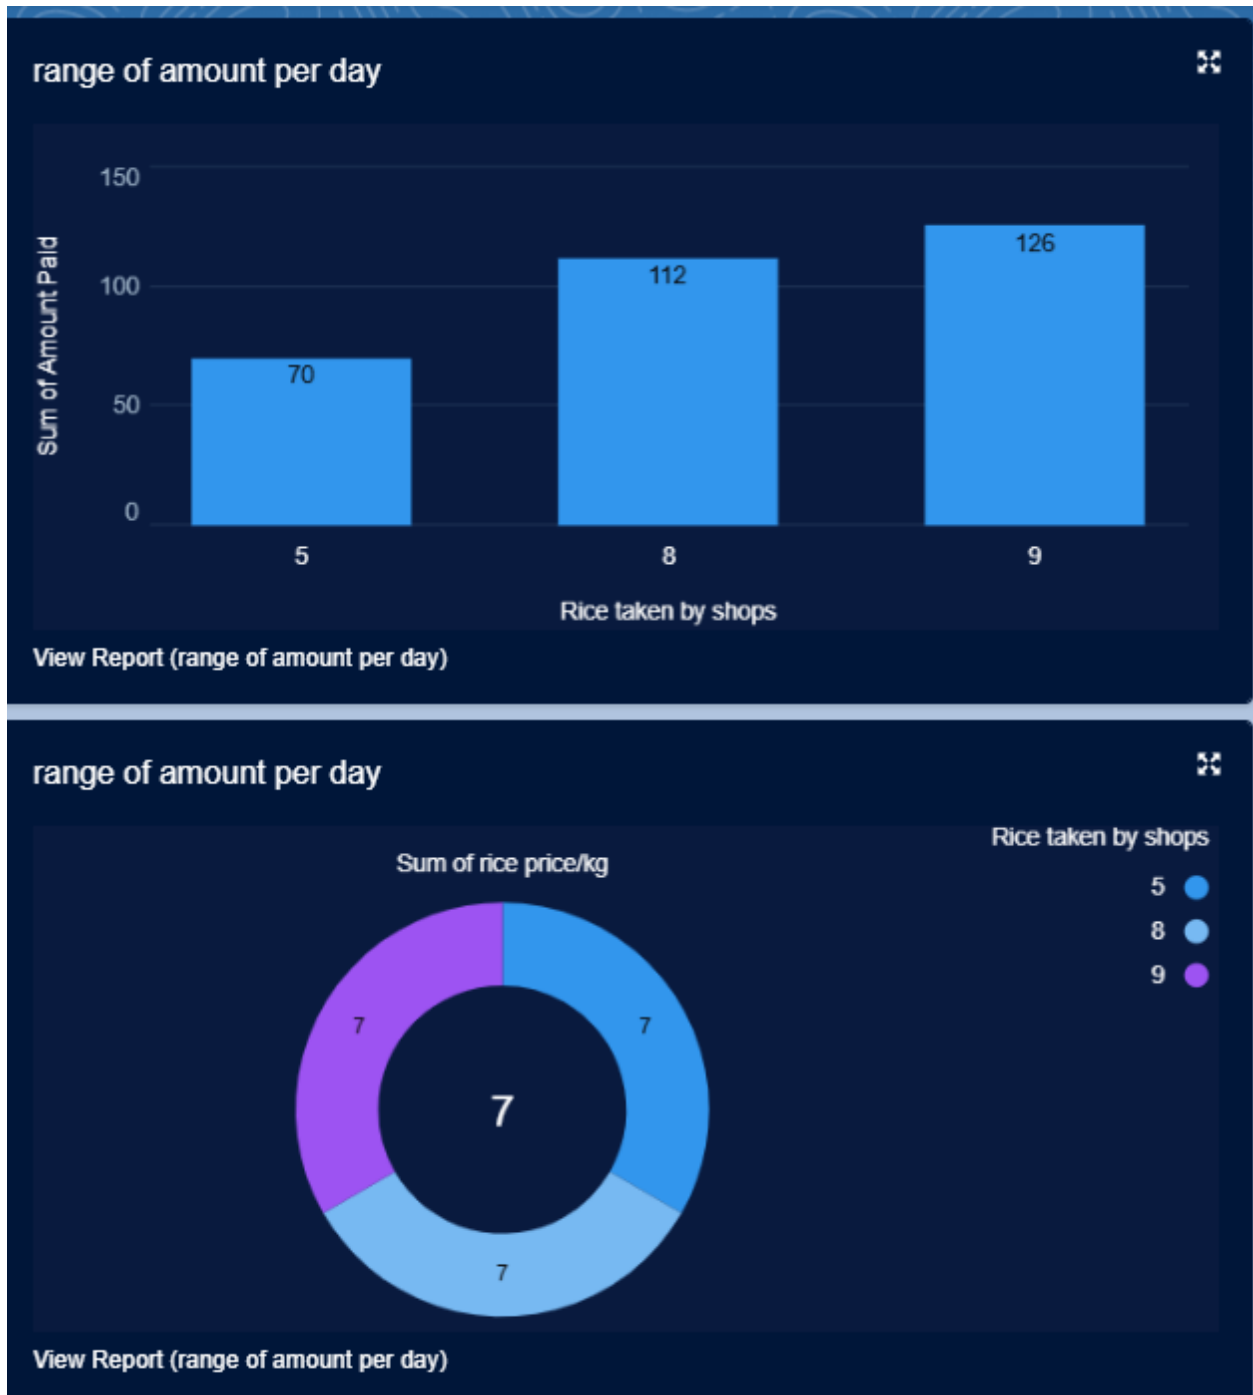

## **6.Key Scenarios Addressed by Salesforce in the Implementation Project.**

1. **Sales Process Automation:** Salesforce can automate sales workflows, reducing manual tasks.
2. **Customer Support:** Salesforce can provide tools to manage customer service cases

and track resolutions.

3. **Data Analytics and Reporting:** Salesforce can generate detailed reports for business insights.

#### DASHBOARDS:

**Resource Management:** Salesforce can help allocate resources efficiently based on business needs.

## **7. Conclusion:**

In this project, Salesforce streamlined operational processes by enabling automated data calculations, real-time reporting, and secure access control. Custom widgets provided visual insights into rice sales, production, and revenue, enhancing decision-making. Validation rules ensured data accuracy, while role-based access protected sensitive information. Rollup summaries and formulas reduced manual effort in calculations. Overall, Salesforce optimized business operations, contributing to improved productivity and planning.
